

REDEN strengthens its team with a Group Head of Development

With a thorough experience and understanding of the renewable energy market on an international level, Nicolas Fasquelle will contribute to sustaining REDEN's position in existing markets but also lead its development in new target countries.

Roquefort, December 13, 2023 - As an international producer of photovoltaic energy active in Europe and Latin America, REDEN reinforces its team with strategic profiles and welcomes Nicolas Fasquelle as Group Head of Development. With more than 20 years of professional experience during which he managed the development of large-scale solar, wind and battery storage portfolios in a variety of geographic areas, Nicolas will bring worthful expertise and insights to support REDEN's organic development in its existing markets on the one hand, but also to expand into new regions with significant and enduring potential to produce solar electricity on the other. He will accordingly lead REDEN's co-development activities for projects acquisitions or greenfield investments, with a clear focus on Europe.

"Renewables have a crucial role to play in preserving the environment, sustaining local economies and fostering their energy autonomy", says Nicolas Fasquelle, Group Head of Development at REDEN. "REDEN has strong values and extensive know-how in developing solar projects embracing noteworthy concerns and objectives: biodiversity, social development, regions' economic growth, safeguarding the environment... This strong CSR approach and the Group's potential in offering concrete solutions to, for instance, help the agricultural sector adapt to climatic hazards, induced me to join the adventure. Therefore, I am looking forward to creating new development opportunities with the teams."

"We are very pleased to welcome Nicolas, since he does not only have a comprehensive view on the market, but moreover has valuable human principles", states Thierry Carcel, CEO of REDEN. "Our Group's history and success are rooted in 4 values among which Ethics and Benevolence. We are indeed committed to producing solar electricity but also to building a beneficial work environment positively impacting our collaborators and society. As a result, Nicolas will help us reach new growth objectives, mainly in Europe, but also strengthen our global corporate approach."

About REDEN

REDEN is an independent producer of photovoltaic renewable energy, focused on the development, construction and operation of photovoltaic power plants on an international level. Founded in 2008 in the French Lot-et-Garonne region, REDEN owns and operates 1 GW of installed capacity on 800 sites. Growing steadily since its creation, REDEN employs more than 200 people across nine countries: France, Spain, Portugal, Greece, Italy, Germany, Mexico, Puerto Rico and Chile. Its values of Benevolence, Ethics, Commitment and Professionalism are at the heart of the Group's performance.

Our solutions: agrivoltaic greenhouses, ground-mounted structures for livestock and arable farming, shade structures for orchards or car parks, and ground-mounted power plants for degraded land.

Since July 2022, Macquarie Asset Management, in a consortium with British Columbia Investment Management Corporation (BCI) and MEAG, has been supporting the Group in its new growth phase.
